SANDESH NAIKWADE

Pune, Maharashtra, India | +91 7058623617 | sandeshnaikwade0@gmail.com | github.com/sandeshsn70

PROFESSIONAL SUMMARY

Full-stack Software Engineering undergraduate (8.88 CGPA; Honors in Data Science, 10.00/10.00) with hands-on experience building AI-powered, end-to-end applications spanning Python backends (Flask, FastAPI, Spring Boot), RESTful APIs, React.js frontends, and SQL databases. Skilled at integrating AI developer tools and LLM APIs — prompt engineering, RAG pipelines, vector embeddings — into real engineering workflows using ChatGPT and Claude to accelerate development and improve code quality. Fresher with proven ability to independently design, build, and deploy full-stack systems from API architecture to a working, production-style interface.

TECHNICAL SKILLS

Backend & APIs: Python, Flask, FastAPI, Spring Boot, RESTful API design & development, Java

Frontend: React.js, JavaScript, responsive UI development, API integration

Databases: SQL, PostgreSQL + pgvector, MySQL, SQLite, MongoDB (NoSQL), JDBC, Hibernate

AI & Dev Tools: LLM API integration, prompt engineering, RAG pipelines, vector embeddings, AI-assisted development workflows (ChatGPT, Claude, GitHub Copilot, Cursor, Replit)

Cloud & Tools: AWS (Cloud Practitioner certified), Docker, GitHub Actions (CI/CD), Git/GitHub, Postman, Jupyter Notebook

Machine Learning: Scikit-learn, Pandas, NumPy, XGBoost, Random Forest, Gradient Boosting, Logistic/Linear Regression, Isolation Forest, Feature Engineering

NLP & Explainability: TF-IDF, text classification, Explainable AI (XAI)

EXPERIENCE

Data Science & Analytics Intern — Altair (AICTE EduSkills, Remote) *Jan 2026 – Mar 2026*

- Executed complete data lifecycles following the **CRISP-DM framework**, implementing automated feature engineering and predictive models.
- Analyzed large business datasets in Python/Scikit-learn, building anomaly-detection models with **88%+ precision**.

KEY PROJECTS

MindSense AI — Mental Health Prediction & Chat Support System | *Python, Flask, React.js, REST API, Scikit-learn, NLP, XAI, SQLite* — 2026

- Engineered a **Flask REST API** backend serving an NLP pipeline (TF-IDF + Logistic Regression) that classifies free-form text into five mental health states, achieving **96.67% accuracy, 97.14% precision** (98.50% ± 2.00% in 5-fold cross-validation).
- Built a **React.js** frontend consuming the API to power an emotional-support chatbot and mood-history dashboard, adding an **Explainable AI (XAI)** layer that surfaces word-level importance for end-user transparency.

Customer Churn Prediction System — IBM Telco Dataset | *Python, Flask, REST API, Scikit-learn, Pandas, NumPy, Matplotlib* — 2026

- Built a **Random Forest** classification model on the IBM Telco Customer Churn dataset, delivering real-time churn-risk predictions via a Flask REST API from key usage features.
- Developed a **Flask dashboard** visualizing churn trends and business recommendations alongside each prediction, translating model output into actionable insight for end users.

Smart City Energy Analytics & Demand Prediction | *Python, Flask, REST API, Scikit-learn, Pandas, NumPy, Chart.js* — 2026

- Performed EDA and time-based feature engineering on hourly energy-consumption data to identify peak/off-peak demand patterns.
- Trained and deployed **Linear Regression and Random Forest** models via a Flask REST API with an interactive web UI, enabling real-time energy-demand forecasting and prediction-history visualization.

InsightX — AI Business Intelligence Copilot | *Java, Spring Boot, Python (FastAPI), MySQL, MongoDB, PostgreSQL + pgvector, JWT, LLM* — 2026

- Built a **Spring Boot** backend integrated with a Python **FastAPI** microservice delivering XGBoost-based sales forecasting and z-score anomaly detection across SQL (MySQL), NoSQL (MongoDB), and vector (PostgreSQL + pgvector) data stores.
- Secured API endpoints with **JWT-based authentication and authorization**, and applied an **LLM** to translate anomaly-detection results into natural-language explanations, improving interpretability for non-technical stakeholders.

EDUCATION

B.E., Computer Engineering (Honors in Data Science) — NMIET, Pune *2023 – 2027*

- CGPA: 8.88/10 | Data Science Honors: 10.00/10.00 | HSC (12th): 68.00% | SSC (10th): 94.20%

CERTIFICATIONS

- Machine Learning Specialization — Stanford Online / DeepLearning.AI (Coursera), Andrew Ng
- Google Data Analytics Professional Certificate (Coursera)
- AWS Cloud Practitioner Essentials
- 150+ DSA problems solved on LeetCode
